"Esophago-bronchial Fistulae Simulating Pulmonary Disease."

1962, Sovremennaya Meditsina, Vol 13, No 9, 1962; pp 8-14.

Abstract [English summary modified] : The difficult differential diag-  
nostic problems posed by small esophago-bronchial fistulae are  
discussed in the context of 3 cases treated for a long time with the  
diagnosis of chronic unspecific bronchitis, bronchiectasis, pulmonary  
tuberculosis. Sour sanguinolent expectorates, paroxysms of cough after  
drinking should suggest esophagoscopy, bronchoscopy, rentgenologic  
study to determine bronchopulmonary extravasation of swallowed contrast  
media. Three case reports, 3 rentgenograms. No references.

for Expert Examinations in Connection with Occupational Disability  
Claims."

Sofia, Suvremenna Meditsina, Vol 14, No 2, 1963; pp 49-53.

Abstract [English summary modified]: Of 694 workers who had sustained  
various types of eye injuries and were applying for disability benefits  
or continuation thereof, examination revealed that no less than 602  
either exaggerated the degree of their loss of vision, or outright  
simulated it (311 exaggerators and 233 simulators.) These data are  
reviewed from various aspects and discussed. Twelve brief case reports.

Orig Pub : Izv. Instantsperim. vet. med. B"lg. AN, 1956, No 5, 175-182

Abstract : Epizootic outbreaks of streptocarcosis (*Streptocarc crassicauda*) and of polymorphosis (*Polymorphus magnus*) in ducks, which are followed by a large mortality rate and which were registered for the first time in Bulgaria, are described here. Vermifuge treatments with a 1.5 ml/kg dose of CCl<sub>4</sub> produced positive results.

"Occupational Diseases of the Nervous System and Neurological  
Medical Aid at Enterprises"

Sofia, Nevrologiya, Psikhatriya i Nevrokhirurgiya, Vol 5, No 1,  
1966, pp 1-11

Abstract: It is brought out that the frequency and gravity of occupational diseases of the peripheral and central nervous system and of psychoneuroses with an occupational background increased in Bulgaria during 1953-1962. This is explained by the accelerated rate of economic development. Statistics of relative severity and of the average number of days lost according to occupations are presented. Conditions arising as a result of exposure to noise and vibrations are discussed. With respect to neurointoxications, the increase of their incidence among agricultural workers, particularly in connection with the use of organophosphorus compounds, is pointed out. The danger presented by radiation sickness to radiologists, engineers using X-rays in work on metals, persons occupied at the nuclear center, etc., is mentioned. Organization of a more effective neurological medical service at industrial enterprises is proposed. Graphs, 58 references (all Bulgarian). Manuscript received Sep 65.

TITLE: On the problem of roasting a non-standard molybdenum concentrate in a fluidized bed

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 3, 1962, 24, abstract 30155 ("Godishnik Khim.-tekhnol. in-t", 1959 (1960), v. 6, no. 1, 1 - 9, Bulgarian; Russian and English summaries)

TEXT: The roasting of a non-standard Bulgarian Mo-concentrate in a fluidized bed was investigated in a laboratory. The effect of temperature and roasting time upon the degree and rate of roasting was studied. The optimum roasting temperature was 580°C. The roasting time varied from 3 to 30 minutes. The degree and rate of roasting in a fluidized bed are considerably higher than in a fixed layer. There are 11 references.
